

Magical

MAGICAL FILM ENTERPRISE CO., LTD.

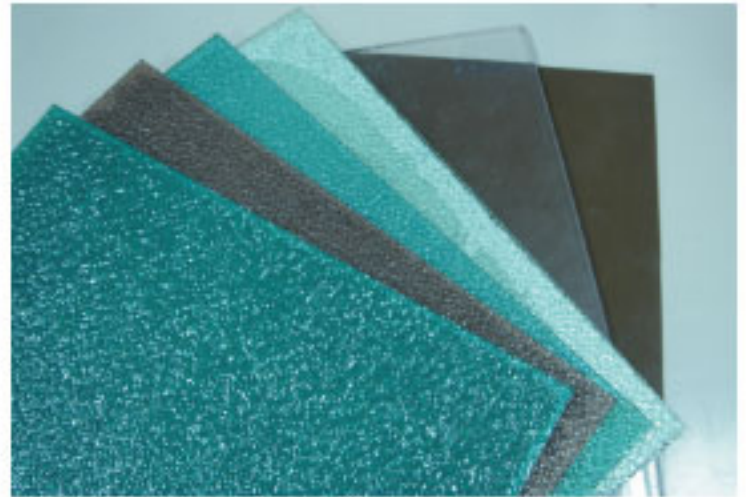

Magical Film

Magical Film enterprise co ltd. established in 2001 in TAIWAN, in the past, we mainly sell plastic products (i.e. PC hollow sheet). In 2004, we started investigating at the development, the Magical Film, which successfully earns highly appreciations by lots of foreign customers is widely used by lamination film, label factory and some decoration. For now, we are developing PETG shrink film and PLA film with high efficiency and precision.

The PC hollow sheet develops the latest formula ducting, owning high gloss and high transparency. The side exposed to sunlight has been through the anti-UV treatment, having high heat resistance; meanwhile, it still preserves the high efficiency of PC sheet. Comparing to the traditional hollow sheet, the medium column lines of PC hollow sheet is not so obvious, instead with brighter and prettier characteristics. And the PC hollow sheet is widely applied in billboard, interior decoration and the ceiling.

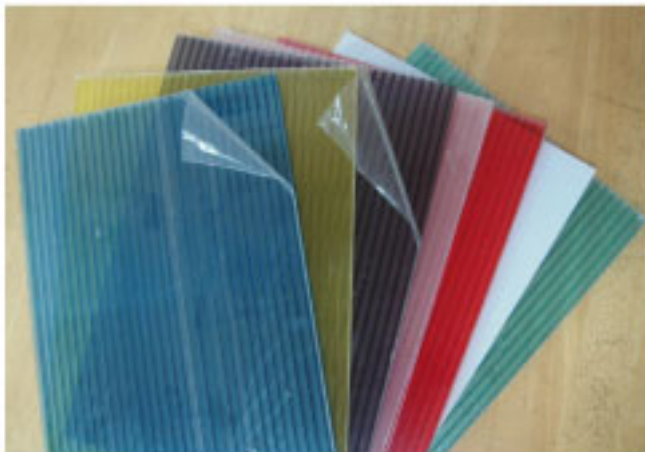

The PC corrugated sheet is a kind of carbonic acid sheet which owns high quality and good tenacity. Its characteristic is with high brunt resistance, clear, light weight, variety and ultra-violet resistance. Because PC corrugated sheet owns high heat resistance, endurance and fire prevention, it is widely applied in architecture material, such as building the roof of balcony, pavilion, and swimming pool ...etc.

PET shrink film is the most environmentally, friendly material in producing all kinds of shrink cover, label film. It has advantages of nonpoisonous, flavorless, non-pollutant, and features high intensity, high shrinkage rate and beautiful packaging effect. It is the most advanced mono-direction shrink film. With its over 70% traverse direction shrinkage rate and less than 3% machinery direction, PET shrink film is close to PVC shrink film in every aspect such as technical level, physical properties, application range and usage. Following the raising consciousness of environmental protection, domestic products progressively meet the requirement from international market, and the result comes to the substitution for PVC shrink film. PET shrink film undoubtedly is the best packaging material at present.

The low viscid PE film is occupied to stamp on sheet which requires following thermoform, and it won't have problems like left-glue after heating, or the protecting film can't be remove after thermoforming. For example: PC and PMMA . It applies in all kinds of plastic sheet, e.g. PC, PP, PS, PET, PVC and PMMA sheet., or general coating sheet, stainless steel sheet, glass, LCD and the computer screen protection film.

Magical

The Magical Film can be used as a packing material or as decoration, it can also be combined with other material (using glue or heat), such as paper, plastics, cloth, synthetic esthetic...etc. Moreover, it can be processed into string shape using in colorful decoration tape or paillette. Because of its unique colorful characteristics, the Magical film could be applied with an assortment of patterns (floral, striped, checked etc...) to achieve ultimate decorative variety.

Product Specification

	RANGE	STANDARD SPECIFICATION			
STYLE NO:		RBF016	RBF018	RBT030	RBT038
CORE SIZE:	3", 6"	6"	6"	6"	6"
THICKNESS:	14micron~75micron	16 micron	18 micron	30 micron	38 micron
WIDTH:	MAX. 1570mm	1020m	1020m	1040mm	1040mm
LENGTH:	MAX. 7000m	3000m	3000m	1900m	1650m
