PLASTIC INJECTION MOLDING MACHINE

230AE

All Electric Plastic Injection Molding Machine

1 高剛性 **2 高效率** **3 節能** **4 整廠輸出**
HIGH RIGIDITY **HIGH EFFICIENCY** **ENERGY SAVING** **WHOLE PLANT OUTPUT**

PET purpose injection molding machine characteristic features :

- Energy saving servo motor system.
- Electrical charging system, enable charging on fly, performing stable plasticizing and high production rate.
- High L / D ratio PET purpose screw, for high efficient plasticizing.
- High efficiency heating system, available in ceramic or infrared heater.
- Newly designed injection unit in low friction linear guide way to ensure precision injection and charging.
- PET purpose locking system, high rigidity platen to minimize mold deformation and increase yield rate.
- Movable platen sit on linear guide way controlled by high speed proportional valve to precisely control the position of mold opening.
- Enlarged ejector and carriage cylinder to ensure stable production.
- Fully covered panel with dehumidifier exit for effective removal of mold sweat and increase of production efficiency.

PREFORM SERIES MACHINE

In PET preform production system solution, CLF integral the entire equipment including injection molding machine, mold, robot, dehumidifying & resin conveying system, mold dehumidifier and chiller. From starting, test run, to production, enable customer to reach production target quicker and easier. For product under 48cav, CLF provide newly designed twin cylinder injection and electrical screw charging injection unit, available with options in preform auto drop or 3 stations outside cooling system for user's choice.

For production line of high productivity or short cycle time, CLF have choice for 2 stage injection system, characteristics being injection separate from plasticizing unit, resin into plasticizing unit through electrical charging reaching stable plasticizing effect. The plasticized material is then conveyed to the bottom plunger for injection and pressure holding. This system allows charging on fly to injection and pressure holding, with aid of 3 stations outside cooling system will greatly reduce the cycle time.

PET PREFORM, ONE STAGE SERIES

PET PREFORM, TWO STAGE SERIES

- Uses energy saving servo motor and electrical charging system, save up to 40% as compared to conventional motor.
- Plunger injection type design, stable product weight, more reliable quality.
- 2 stage injection systems effectively reduce cycle time, increase production.
- Suitable for multi-cavity and heavy shot weight PET product.
- Complete turnkey, fast automation reduces labor cost.

CAP SERIES MACHINE

Cap production aiming for mass production and effective cost saving. CLF fast cycle hybrid injection molding machine with electrical servo drive locking system, incorporate with reliable Japanese ball screw, precise locating of ejector on fly, clean lubricating system to avoid contamination of products, single injection cylinder design, incorporate accumulator and servo valve for precision control, electrical servo motor charging system to enable charging and ejector on fly, which shorten cycle time. For mold and ancillary equipment having long term cooperating partner, CLF can provide the best solution for customer to create maximum profit.

- Hybrid design, having advantages of high precision, high speed, energy saving and multi circuit movements.
- Electrical locking mechanism design, high speed, high reproducibility, incorporate with Siemens servo motor and driver, NSK ball screw, ensuring high precision and lifespan.
- Injection packed with accumulator controlled by servo valve, single cylinder design with electrical charging, ensuring high stability, low inertia, and high acceleration.
- KEBA controller, colored 12" TFT-LCD touch screen panel.
- Ceramic heating system, high mixing PP & PE screw.
